The flowchart illustrates the third embodiment of the authentication system, involving four main components: PORTABLE RECORDING MEDIUM (6), USER INFORMATION PROCESSOR (2), MEDIATOR INFORMATION PROCESSOR (7), and AUTHENTICATION INFORMATION PROCESSOR (3). The process begins with the USER INFORMATION PROCESSOR (2) reading the first authentication number and conversion rule (150) from the PORTABLE RECORDING MEDIUM (6). It then sends the first authentication number (140) to the MEDIATOR INFORMATION PROCESSOR (7). The MEDIATOR INFORMATION PROCESSOR (7) sends the first authentication number (141) to the AUTHENTICATION INFORMATION PROCESSOR (3), which performs checking (142). The AUTHENTICATION INFORMATION PROCESSOR (3) then sends the second authentication number (143) to the MEDIATOR INFORMATION PROCESSOR (7). The MEDIATOR INFORMATION PROCESSOR (7) sends the second authentication number (146) to the USER INFORMATION PROCESSOR (2), which converts it to a third authentication number (147). The USER INFORMATION PROCESSOR (2) then sends the third authentication number (152) to the PORTABLE RECORDING MEDIUM (6), which records it (153). Finally, the PORTABLE RECORDING MEDIUM (6) sends the third authentication number (151) back to the USER INFORMATION PROCESSOR (2). The process concludes with an END state for each component.
